Legal Tech  
Start-ups

*where legal meets tech*

k://lab

## New Era New Solutions

While assisting legal tech start-ups grow in our k://lab programme, we have encountered several novel technologies which aim to streamline mundane processes which we have to deal with daily. These technologies are not only applicable to the legal industry but to almost all industries, with the exceptions being few, far, and in between.

## Start-up Showcase

We are cooperating with Algoritmik start-up which has created an AI platform to scan template documents (land and corporate registry excerpts, etc.) and present a report with key information extracted from such documents. This solution has a direct impact on our practice both in terms of time and cost-saving, however, it can be easily accommodated for any other industry which processes a large number of documents (e.g. payment orders, invoices, etc.).

In addition to this, we are also cooperating with start-ups who have created a platform for whistle-blowers as well as a blockchain-based electronic signature solution. These solutions bring speed and security where it is needed the most, especially in the post-COVID-19 era where remote work is the norm.

For more information and legal implications of these solutions, please see our previous articles, but you can also contact us directly at [serbia@karanovicpartners.com](mailto:serbia@karanovicpartners.com).
